

Product Brief

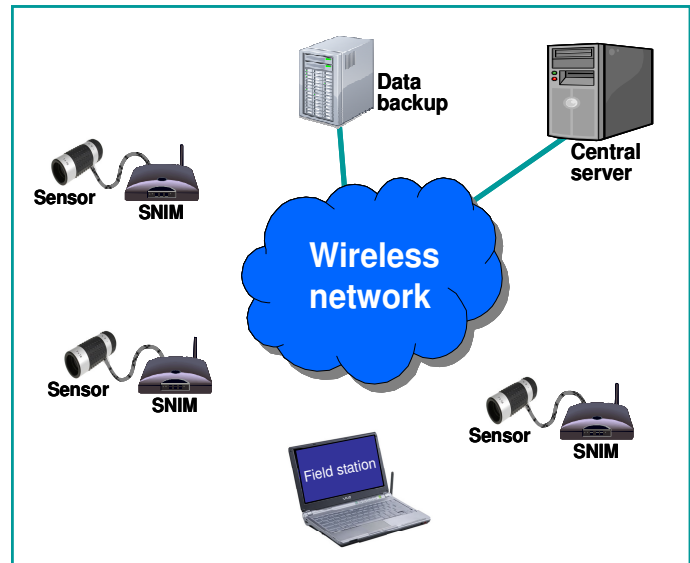

Wide-Area Sensor Network Solution

Neocific, a wireless network and system developer, introduces its wide-area sensor network (WASN) solution for various telemetric applications such as remote monitoring and control and real-time automatic remote data acquisition. The capabilities and features of the WASN are designed to enable its users to significantly reduce operation expenses and increase productivity. The system can be used in a wide range of applications for

- environment management
- water management
- industrial
- business
- transportation
- security
- health care

Neocific tailors its turn-key solutions to its customers to meet their specific business needs by providing

- Network components
 - Central server
 - Data backup server (optional)
 - Field stations (optional)
 - Sensor network interface modules (SNIM's)
- Sensor network operation and management software suite
- System customization
- System integration and installation
- Tests and diagnosis
- Training

Capabilities

- Scalable to allow expansion to meet future business needs
- Future-proof SNIM design for upgradability
- Adaptable to various wireless networks
- Enabling real-time monitoring and analysis
- Central monitoring and control
- Central server located anywhere with internet access

Key Features

- Remote programming and control
- Authentication and encryption for security
- SNIM tampering alert
- Access to data base by field stations
- Data backup site for redundancy
